Dear International Scientific Advisory Committee,

Although the publications tab of the HVP website lists many papers about guidelines and standards development, I could not find a clear list of those endorsed by the HVP.

Therefore, I would like to propose that the HVP recognizes the HGVS variation nomenclature guidelines (www.hgvs.org/mutnomen) as the standard human variation nomenclature. Considering the current status of the guidelines, this activity may not need the full standards development process. In my opinion, recognition as an HVP standard will not only strengthen the position of these guidelines, but also the position of the HVP as an organization involved in standard development and approval.

Best regards,

Peter Taschner
